© 2017 Utah Scientific, Inc., All rights reserved. Any use or reproduction of this guide's contents without the prior written consent of Utah Scientific, Inc. is strictly prohibited.

- All other product names and any registered or unregistered trademarks mentioned in this guide are used for identification purposes only and remain the exclusive property of their respective owners.

Notice

Information contained in this guide is subject to change without notice or obligation. While every effort has been made to ensure that the information is accurate as of the publication date, Utah Scientific, Inc. assumes no liability for errors or omissions. In addition, Utah Scientific, Inc. assumes no responsibility for damages resulting from the use of this guide.

FCC Compliance (USA) and Digital Equipment Compliance (Canada)

This equipment has been tested and found to comply with the limits for a Class A, digital device, pursuant to Part 15, Subpart B of the FCC Rules and the Canadian EMC Requirement (ICES-003). These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case, the user will be required to correct the interference at their own expense. Shielded cables must be used to ensure compliance with the FCC Class A limits.

Declaration of Conformity

Utah Scientific, Inc.

4750 Wiley Post Way, Suite 150
Salt Lake City, Utah 84116-2878 U.S.A.

We declare our sole responsibility that the Utah-400 Digital Routing Switcher is in conformance with the following standards:

Emission

- EN55022:1994+A1&A2

Immunity

- EN55024:1998
- EN61000-3-2
- EN61000-3-3

Safety

- IEC 60950-1:2001 /EN 60950-1:2001

Following the provisions of the Directive(s) of the Council of the European Union:

- EMC Directive 89/336/EED
- Low Voltage Electrical Directive 72/23/EEC

Utah Scientific, Inc. hereby declares that the product specified above conforms to the above Directive(s) and Standard(s).

Important Safeguards and Notices

This section provides important safety guidelines for the Operator and Service Personnel. Specific warnings and cautions are found throughout the guide where they apply, but may not appear here. Please read and follow the important safety information, specifically those instructions related to risk of fire, electric shock, or injury to persons.

Safety Symbols

- Hazardous Voltage symbol

- Caution symbol. The product is marked with this symbol when it is necessary to refer to the manual to prevent damage to the product.

Warnings

Please observe the following important warnings:

- Any instructions in this guide that require opening the chassis, changing a power supply, or removing a board, should be performed by qualified personnel only. To reduce the risk of electric shock, do not perform any service unless you are qualified to do so.
- Heed all warnings on the unit and in the operating instructions.
- Do not use this product in or near water. Disconnect AC power before installing any options or servicing the unit unless instructed to do so by this manual.
- This product is grounded through the power cord ground conductor. To avoid electric shock, plug the power cord into a properly wired receptacle before connecting the product inputs or outputs.
- Route power cords and other cables so they won't be damaged.
- The AC receptacle (socket) should be located near the equipment and be easily accessible.
- Disconnect power before cleaning. Do not use any liquid or aerosol cleaner - use only a damp cloth.

- Dangerous voltages exist at several points in this product. To avoid personal injury, do not touch exposed conductors and components while power is on. Do not insert anything into either of the systems two-power supply cavities with power connected.
- Do not wear hand jewelry or watches when troubleshooting high current circuits, such as power supplies. During installation, do not use the door handles or front panels to lift the equipment as they may open abruptly and injure you.
- To avoid fire hazard when replacing fuses, use only the specified correct type, voltage and current rating as referenced in the appropriate parts list for this product. Always refer fuse replacement to qualified service personnel.
- Have qualified personnel perform safety checks after any service.

Cautions

Please observe the following important cautions:

- When installing this equipment do not install power cords to building surfaces. To prevent damage when replacing fuses, locate and correct the problem that caused the fuse to blow, before reconnecting power.
- Use only specified replacement parts

Warranty Policies

Hardware Warranty

Utah Scientific, Inc. warrants to the original purchaser that the Utah Scientific hardware is free from defects in materials and workmanship and will perform substantially in accordance with the accompanying written materials under normal use and service for a period of ten (10) years from the date of shipment. Any implied warranties on hardware are limited to ten (10) years. Some states/jurisdictions do not allow limitations on duration of an implied warranty, so the above limitation may not apply to certain specific purchasers.

Software Warranty

Utah Scientific warrants that the software will perform substantially in accordance with the accompanying written materials for a period of one (1) year from the date of shipment.

Customer Remedies

For the first one (1) year after purchase of the software and the first ten (10) years after the date of purchase of the hardware, Utah Scientific's and its suppliers' entire liability and purchaser's exclusive remedy shall be, at Utah Scientific's option, either:

- Return of the price paid, or
- Repair or replacement of the software or hardware that does not meet the above warranties and is returned to Utah Scientific under the returned materials authorization (RMA) process with freight and forwarding charges paid.

After the initial warranty periods, purchaser's exclusive remedy is the repair or replacement of the hardware upon payment of a fixed fee to cover handling and service costs based on Utah Scientific's then-current price schedule. The above warranties are void if failure of the software or hardware has resulted from an accident, abuse, or misapplication. Any replacement software or hardware will be warranted for the remainder of the original warranty period or thirty (30) days, whichever is longer.

No other warranties. To the maximum extent permitted by applicable law, Utah Scientific and its suppliers disclaim all other warranties, either express or implied, including, but not limited to implied warranties of merchantability and fitness for a particular purpose, with regard to the software, the accompanying written materials, and any accompanying hardware. This limited warranty gives the purchaser specific legal rights. These rights may vary in certain states/jurisdictions.

No liability for consequential damages. To the maximum extent permitted by applicable law, in no event shall Utah Scientific or its suppliers be liable for any damages whatsoever (including without limitation, damages for loss of business profits, business interruption, loss of business information, or any other pecuniary loss) arising out of the use of or inability to use

Utah Scientific products, even if Utah Scientific has been advised of the possibility of such damages. Because some states/jurisdictions do not allow the exclusion or limitation of liability for consequential or incidental damages, the above limitation may not apply in those circumstances.

Basic Chassis Configuration

Figure 1-1. LC16 Configuration

Figure 1-2. LC32 Configuration

Figure 1-3. LC80 Configuration

System Introduction

Launching UCON

Launch UCON by double-clicking the application icon inside the directory.

FIGURE 1-1.

Next, open the .ucn file saved for your current configuration.

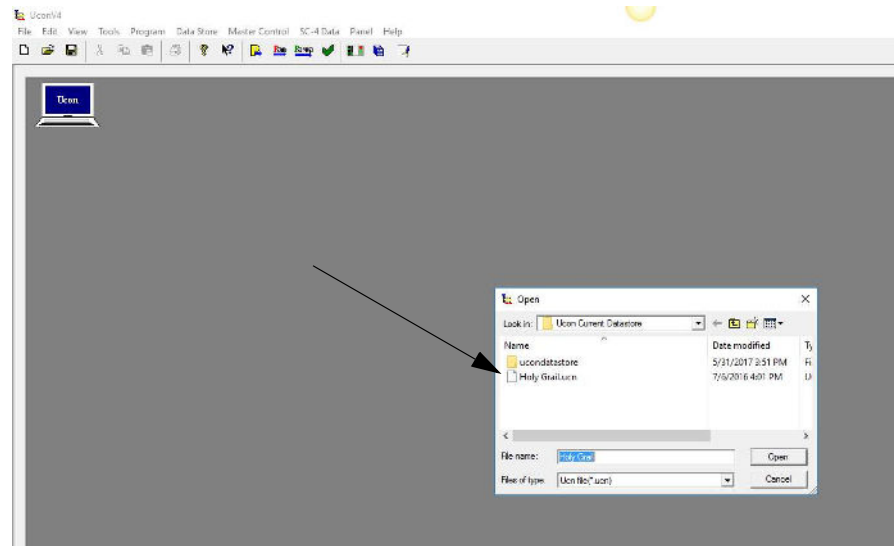

FIGURE 1-2.

Once opened, your saved configuration will appear within the UCON display.

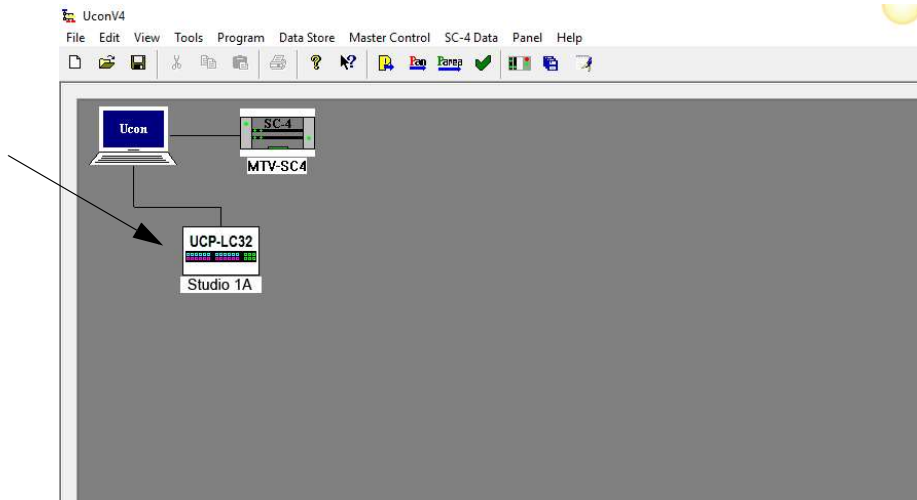

Figure 1-4.

Now double-click the layout configuration (noted icon above) to activate your working interface. You can also activate the panel editing window (shown below) by right-clicking the icon and selecting 'Edit' from the drop-down menu.

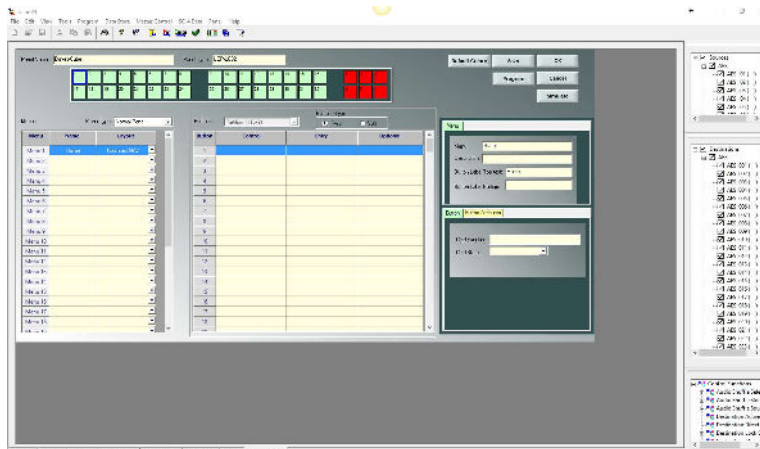

FIGURE 1-3.

The LC-32 is displayed in the example above.

Previously created sources and destinations are listed alphabetically in the two lists at the right side of the display. The items contained in the functions list (lower-right) can be directly applied to individual buttons.

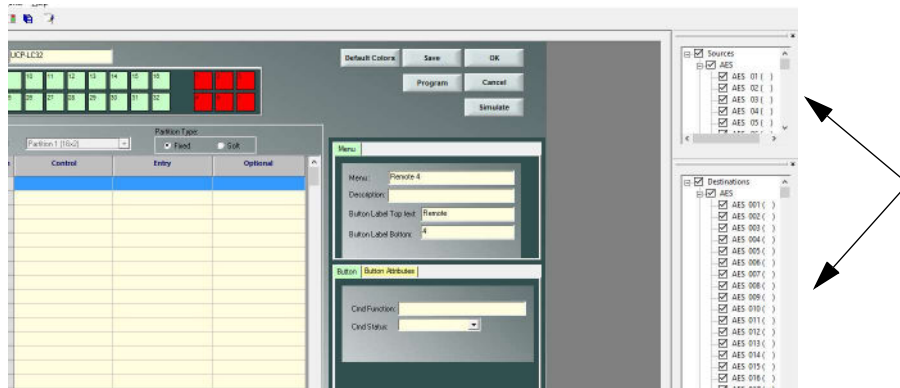

FIGURE 1-4.

The items that will be placed in the Name column are known as “Menus”, and in our example there are 32. When added to a button, the menu becomes a set of functions, described in more detail within the center table. Each menu can contain up to 256 different buttons.

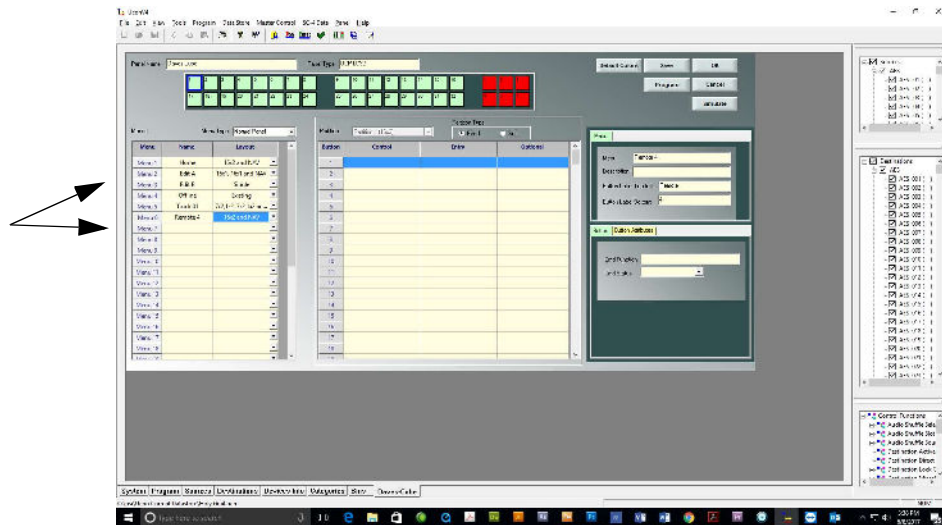

FIGURE 1-5.

The layouts within the corresponding column are available for any one of the indicated 'menus' to the left (Name column). The Panel Layout selection is made by clicking the drop down menu within the layout column (illustration below) and making a selection from the list provided.

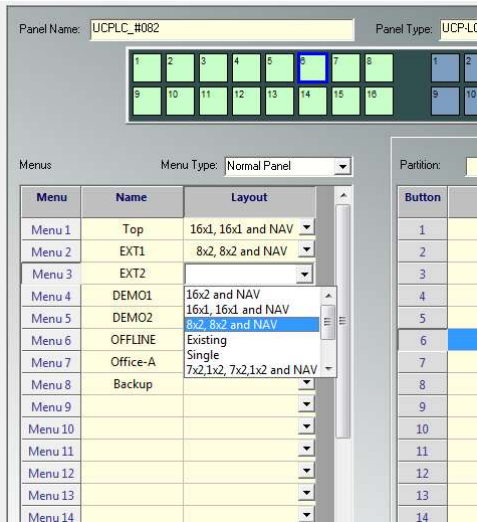

Figure 1-5. Initial Build

When a layout is selected, the 'Fixed' button (on the actual panel, upper left) will change the button color state of all Source buttons on the panel.

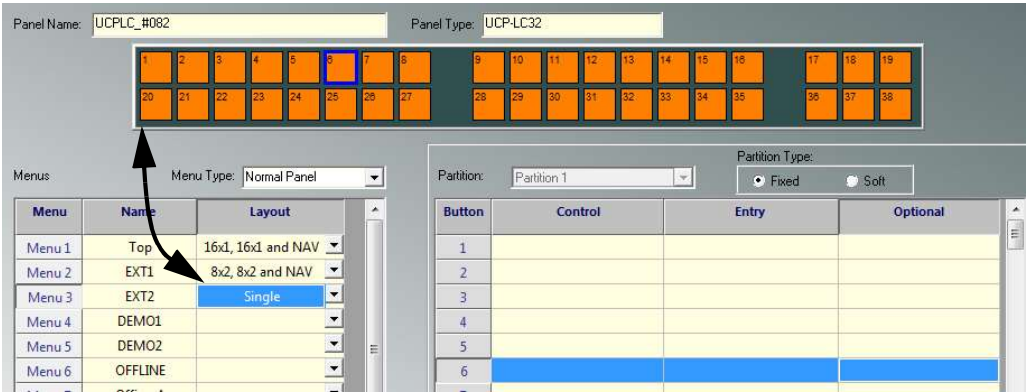

Figure 1-6. Panel Example

Layout Selection - Examples

The illustration below contains a partition (1) 16x2 navigation panel. Sixteen buttons along the top by two rows.

Figure 1-7. 16x2.

In the following config there is no 'Partition 2', as partition 2 would contain the navigation buttons, which are not modifiable.

Figure 1-8. 16x1 (containing 2 partitions)

In the above layout, the first partition corresponds to the light green buttons, while the section partition corresponds to the yellow buttons.

The navigation buttons are also included (red buttons, far right). The 8x2 layout illustrated below is defined by two partitions - 8 buttons along the top by two rows (light green and blue buttons)

Figure 1-9. 8x2

The illustration below is a 'Single Mode' panel, which contains a total of 38 buttons

Figure 1-10. Single Layout

The buttons to the far right are typically used as navigation buttons, and can include page up and page down controls.

Important note concerning the 'single mode' operation

- It is always a good idea to include a 'back' button for the purpose of returning to a previous menu layout, otherwise the user is isolated in the current button layout.

The Page Up and Page Down buttons are recommended for convenient navigation.

Drag the page up and down buttons from the location shown (lower right column) to the specified button number inside the table (middle). You simply drag this button definition to the specific button number for the specific location you would like to assign this command.

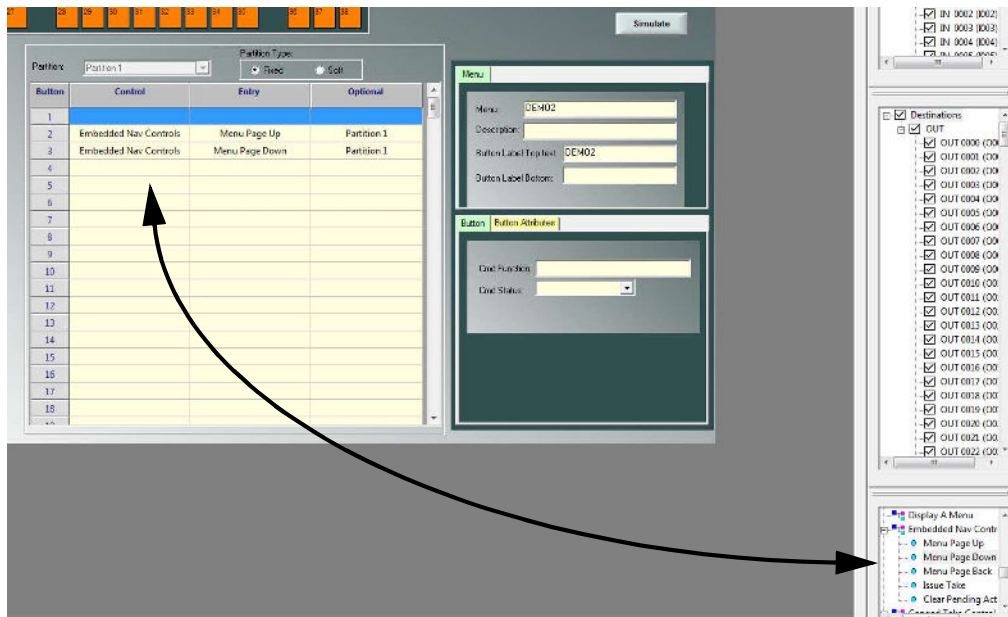

Figure 1-11. Page Navigation

Remember that page UP and page DOWN will cycle through sources and destinations. If you would like to step back to a previous layout however, use the 'Back' button, which is located in the same column as Page Up and Page Down.

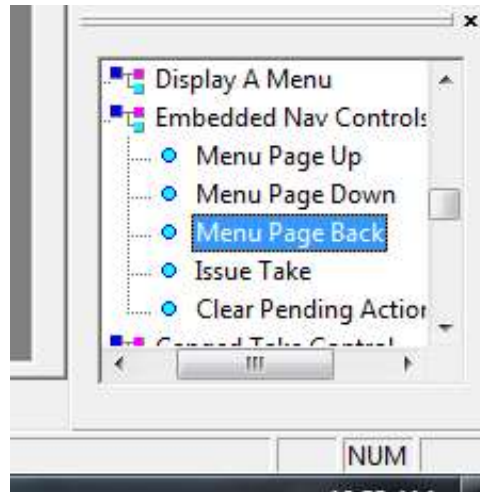

Figure 1-12. Back button

7x2 and 1x2

Partition one contains Seven buttons by two rows. The yellow and orange buttons correspond to a 1x2, which can contain a page up/page down, or back button. This configuration could contain sources on one group with destinations on the other. The navigation buttons are fixed; page up and down, and home buttons.

Figure 1-13. 7x2

18x2

This corresponds to 18 inputs by two rows, all on the same partition. This layout allows all status visibility within the same partition.

Figure 1-14. 18x2

Partition Display - 8x2 Configuration

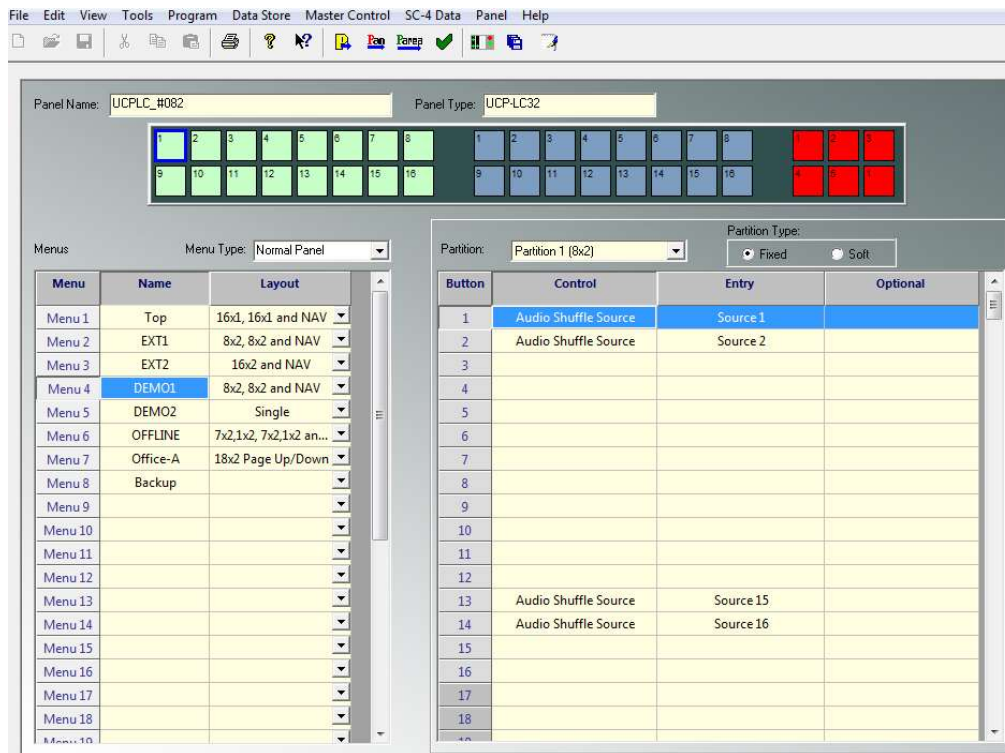

Figure 1-15. 8x2

In this configuration the Sources are displayed within the tables by clicking the light green buttons on the virtual panel.

The Destinations are shown in the tables by clicking the blue buttons on the virtual panel. The 3rd partition (red navigation buttons) are not modifiable.

Figure 1-16. Destinations

The right (blue) buttons are populated with sources by making a list selection from the column shown and dragging all items to the middle table.

Blank Panel Setup

During an initial blank panel setup, all menus are defined from scratch within the left-most column, labeled 'menu'.

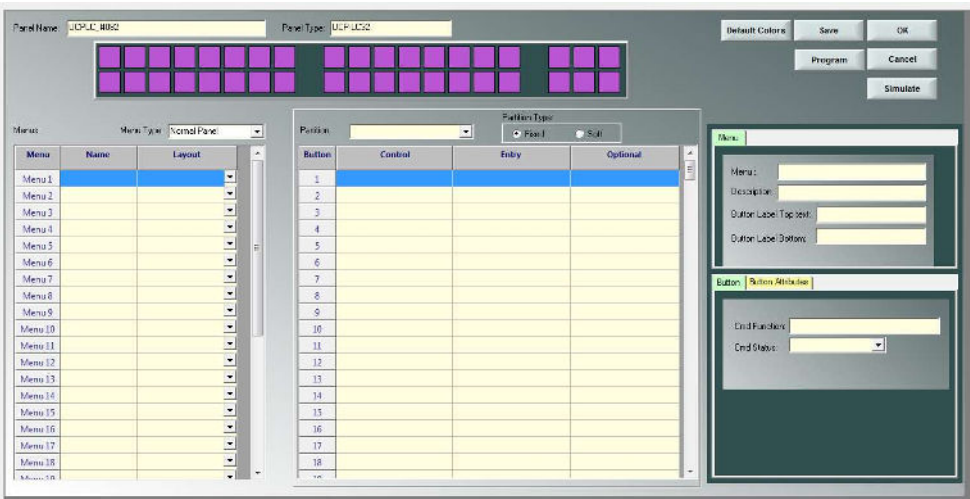

Figure 1-17. Blank panel

Menus		Menu 1

Menu 9		

Figure 1-18. Menu column

Functions

The Function selection is located within the listing at the lower-right corner of the screen display. These individual functions are used to populate the actual function table (center of the screen) for each one of the panels created.

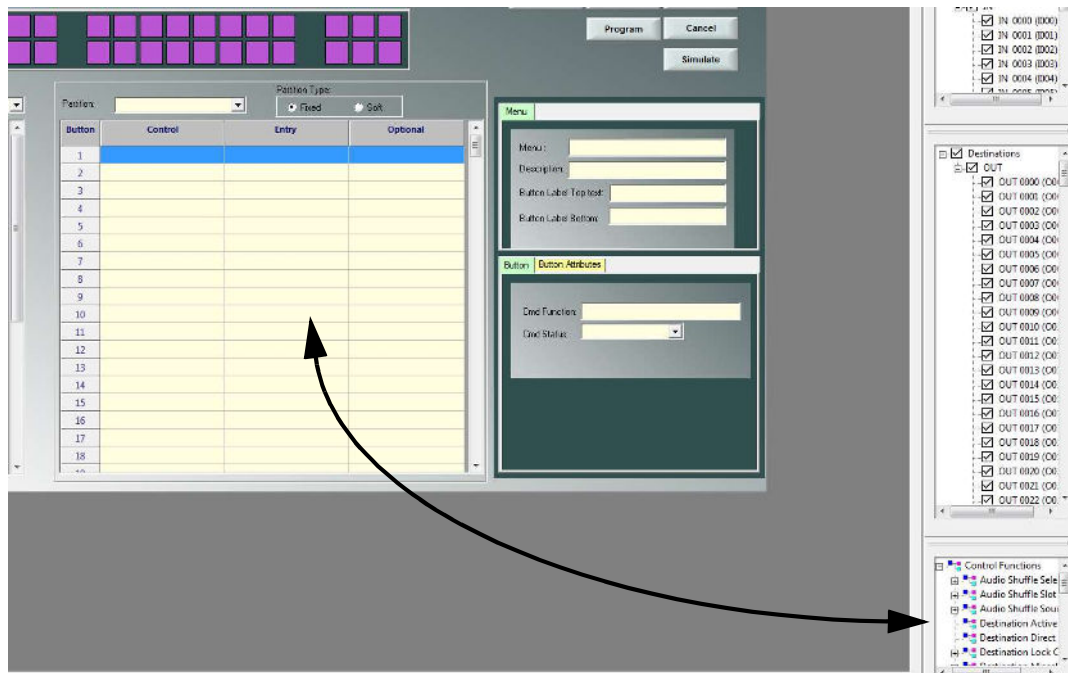

Figure 1-19. Functions selection

Basic Layout and Definitions

New menus are created inside the left-hand table, while corresponding functions are defined within the center table. The panel graphic at the top of the display is the actual 'menu view' of the panel being developed. You can click individual buttons within the graphic and watch the line items move inside the function table (below).

Figure 1-20. Basic Layout Definitions

Note: The button numbers within the graphic are literal. Meaning #25 on the graphic will correspond to the actual #25 within the function table. This is most applicable to a PAGE UP and PAGE DOWN button application. In the same manner, when menu items are clicked (left-hand table), the panel graphic will change to follow the different menu sets selected within the table. Panel Name (Located in the upper-left corner) This is the actual panel name that is programmed within UCON, and is also the name you will see underneath the panel's icon within the main UCON display.

Figure 1-21. Panel Name

Panel Type (Top middle)

This is the actual panel type; the LC32 in our working example.

Figure 1-22. Panel Type

Default Colors

The default colors are typically assigned to the system's function buttons. This affects the items in the Function list within the lower-right display listing. The default colors are also used to define the ON and OFF button states.

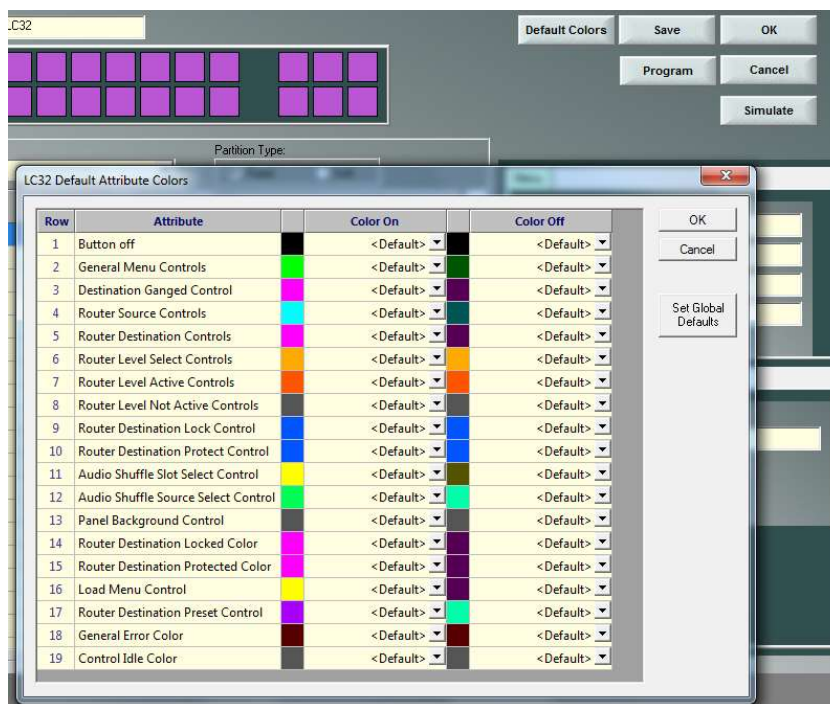

Figure 1-23. Default Colors

Save Button

The Save button commits all changes to the current screen in progress.

Figure 1-24. Save Button

Program

The panel is programmed from this location.

Figure 1-25. Program

Cancel

Ignores all changes made prior to exiting the screen.

Figure 1-26. Cancel Button

OK

Immediately Saves all work done (without a confirmation dialog), then exits.

Figure 1-27. OK Button

Menu Dialog Box (Upper-right area, middle of the display)

This dialog contains menu attributes, or definitions of the buttons in the menu table (left side of the display). Text can also be modified from this location.

Panel Operation

Setting the System up with a standard issue template

The first time a layout is defined you will be presented with an initial menu item called 'Top', which occupies the upper left-most cell.

Figure 1-28. Top (menu item)

Top is hand typed in, and actually corresponds to a 'top' menu, meaning, this is the menu that is located farthest back (when Back his selected).

Panel Name: UCPLC_#082 Panel Type: UCP-LC32

Menus Menu Type: Normal Panel Partition:

Menu	Name	Layout

Figure 1-30. 16x2 display

The “x1” or “x2” following the layout title represents the number of partitions. As an example, 16x1 will appear as follows:.

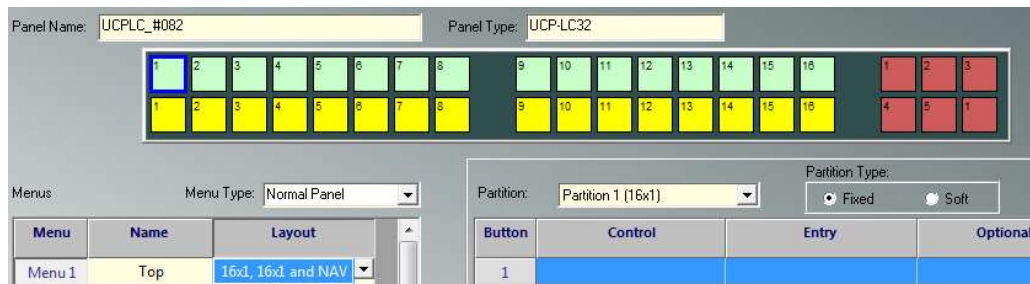

Figure 1-31. 16x1 example

The partition structure is represented inside the middle table and can be displayed graphically by clicking the actual buttons (up or down) on the interface. With the row highlighted in the ‘Menu’ table (far left), menu items can be dragged from the lower-right listing to the Control column within the main table.

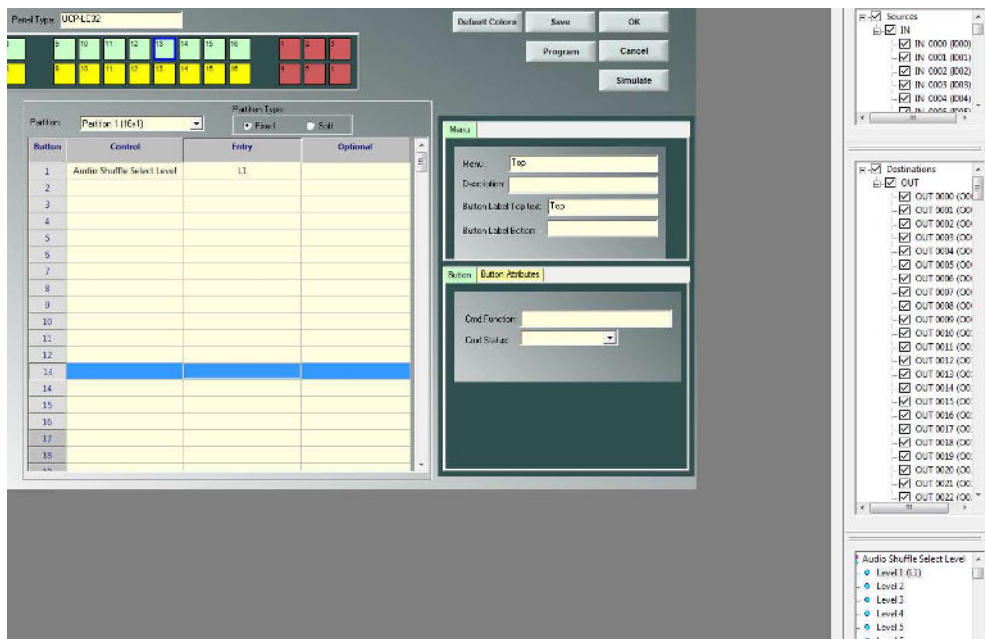

Figure 1-32. Button drag

In our example, specific menu items are selected from the corresponding ‘menu’ drop-down listing within the column at the lower right corner of the display interface.

Note: The Partition table remains blank at this point in the setup.

The screenshot displays the configuration interface for the UCP LC 32/80. At the top, the 'Panel Name' is 'UCPLC_#082' and the 'Panel Type' is 'UCP-LC32'. Below this is a grid of 16 buttons, numbered 1 to 16, arranged in two rows of eight. The first row of buttons is green, and the second row is yellow. To the right of the grid is a small red grid with 3 buttons numbered 1 to 3. Below the grid, the 'Menu' section shows 'Menu Type' set to 'Normal Panel'. A table lists five menus: Menu 1 (Name: Top, Layout: 16x1, 16x1 and NAV), Menu 2, Menu 3, Menu 4, and Menu 5. To the right of the menu table, the 'Partition' section shows 'Partition 1 (16x1)' selected, with 'Partition Type' set to 'Fixed'. Below this is a table with columns 'Button', 'Control', 'Entry', and 'Optional', containing five rows of data.

Menu	Name	Layout
Menu 1	Top	16x1, 16x1 and NAV

3			
4			
5			

Figure 1-33. Blank partition table

The only menu item that exists is 'Top' along the Control Functions column (lower right of display).

The screenshot shows the 'Menu' configuration screen for the 'Top' menu. It features a 'Menu' tab at the top. Below the tab, there are four input fields: 'Menu:' with the value 'Top', 'Description:', 'Button Label Top text:' with the value 'Top', and 'Button Label Bottom:'. The background is a dark grey with a lighter grey border.

Figure 1-34. Top - name and description

Top Menu Button Population

The illustration below shows desired buttons for use dragged from the menu listing in the lower-right column to the 'Partition Type' table in the middle of the display.

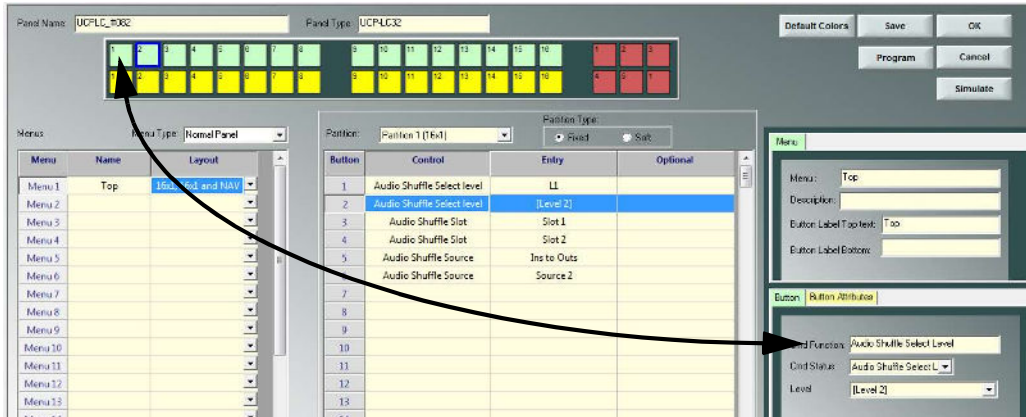

Figure 1-35. Partition List

In this scenario, pressing button #1 on the actual panel reveals all items listed in the Partition Type table.

Saving and Program

Before programming a panel configuration, save your current layout by clicking the corresponding 'Save' button. (The Save action is immediate, with no feedback dialog shown.)

Once this is done click the **Program** button. This will send the program layout to the actual panel. Once complete the panel will reboot with a flashing light sequence on the fixed panel.

Setup - Review

- 'Top menus' are defined in the far left column.

The screenshot shows a software interface for configuring menus. At the top, there are labels 'Menus:' and 'Menu Type: Normal Panel' with a dropdown arrow. Below this is a table with three columns: 'Menu', 'Name', and 'Layout'. The table contains 18 rows, labeled 'Menu 1' through 'Menu 18'. The first row, 'Menu 1', is highlighted in blue. In this row, the 'Name' column contains the text 'Top' and the 'Layout' column contains a dropdown menu with the text '16x1, 16x1 and NAV' selected. The other rows in the table have empty 'Name' and 'Layout' columns. To the right of the table is a vertical scrollbar.

Menu	Name	Layout

Menu 17		
Menu 18		

Figure 1-36. Top Column

- The panel type is designated in the drop-down to the immediate right of the top menu name.

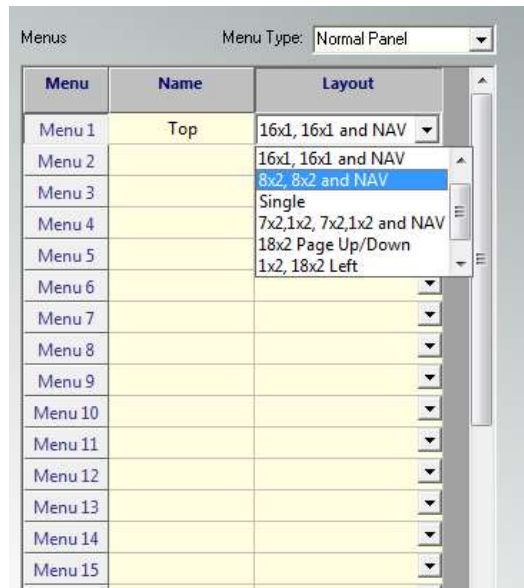

Figure 1-37. Panel Type

- Buttons (within that particular panel) are defined by dragging items from the lower-right table to the middle (Partition Type) table. Add (or designate) entries in the *Partition Type* table by making your selections within the table shown (below) and dragging each to the desired column location.

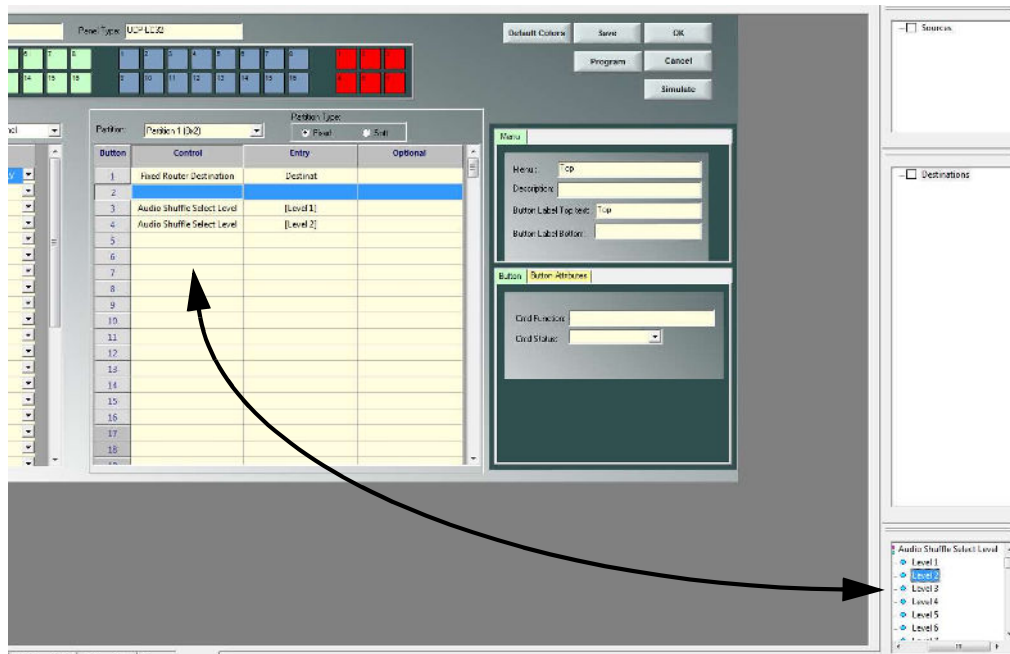

Figure 1-38. Partition button populate

The Attribute window contains specific button definitions. You can make font type and size modifications at this location.

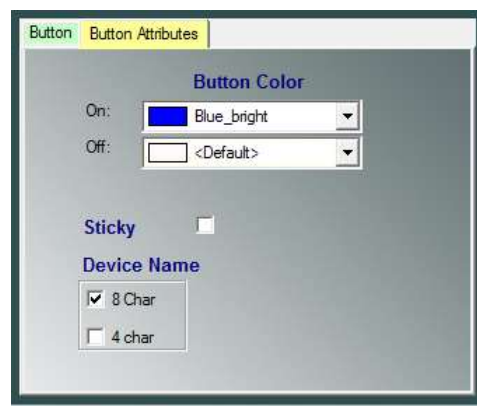

Figure 1-39. Button Attribute

Programming - Review

To start your LC-32 panel configuration, double-click 'New Panel' icon immediately underneath 'Create New Device' along the upper-right hand column of the UCON interface.

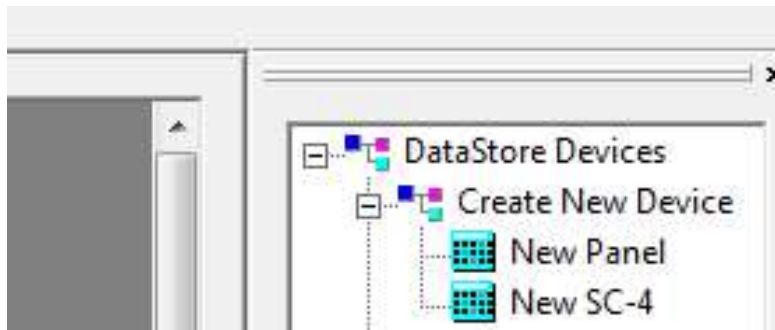

Figure 1-40. New Panel icon

A dialog will appear asking you to name the Panel.

Figure 1-41. Device Name

Once the panel is named, select a panel type from the dialog that appears.

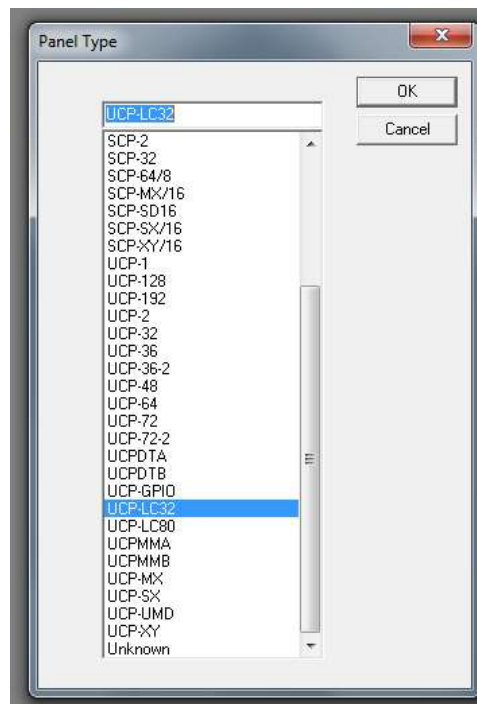

Figure 1-42. Panel Type

Next, double-click the newly created panel (icon) within the center section of the display.

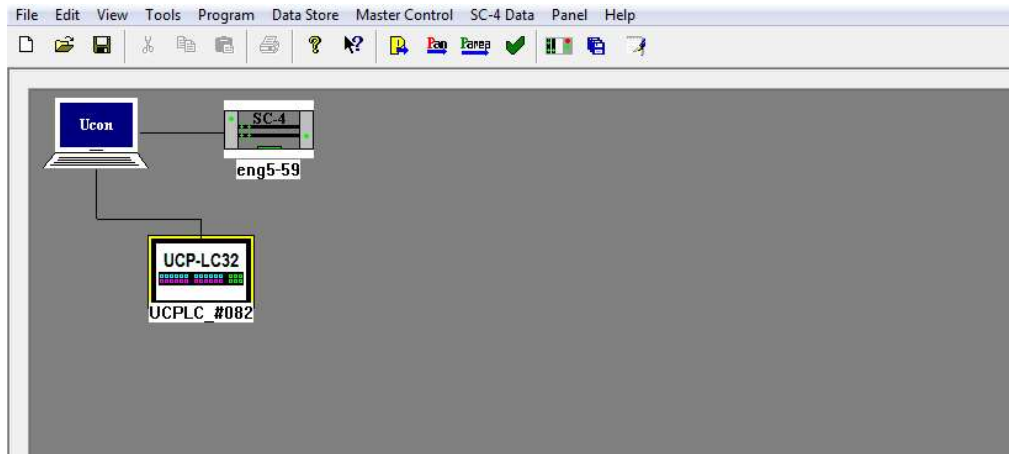

Figure 1-43. New Device - System view

The new device will include an associated tab at the bottom of the display. Double-clicking the device icon will activate the panel view.

Note: *You are supplied with panel templates, which are available when the Panel menu is accessed – UCP-LC-32 drop down menu. From here, a selection of templates appears within a drop-down menu. This will essentially provide a standardized panel template populated with defaults that the user can use to add their own Sources and Destinations.*

Simulating Your Panel Configuration

Click the **Simulate** button to activate a live representation of your panel layout directly within the UCON interface.

Figure 1-44. Simulate button

Your fully configured and operational panel will be presented on screen.

Figure 1-45. Panel simulation

Important: Use caution when performing the Take command, as the panel is now live on air.

Click the Program button (upper right within the display) when complete.

Note: When the Program button is clicked in U-CON, the U-CON interface will indicate the process as being 'Done', but there is a lag time of a few seconds for the fixed panel communication.

System Salvo Entry

A system salvo is a desired set of outputs that correspond to a set of inputs, matched to a single Take. Salvos are created when a device is edited within UCON by right-clicking the device, then selecting edit from the pop-up menu.

Setting Up a Salvo

Right-click the controller icon in the UCON interface and click *Edit*.

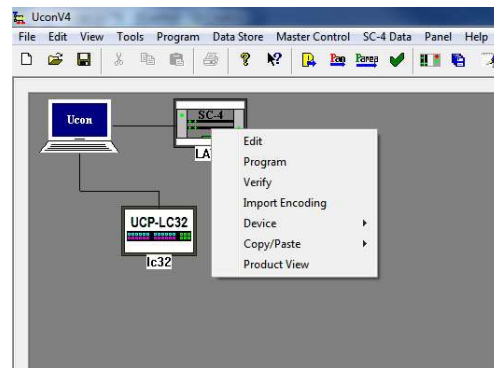

Figure 1-46.

The following screen will appear. Click the Salvos button to activate the Source and Destinations configuration dialog (next Figure).

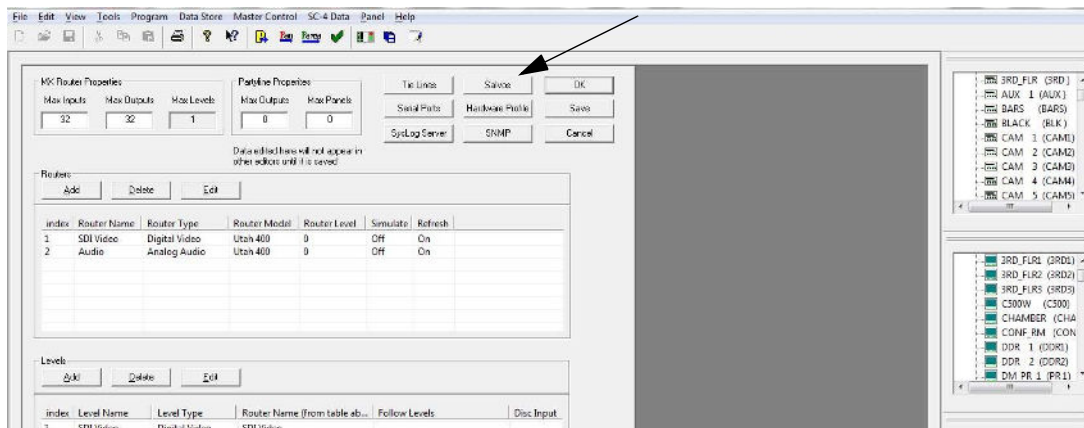

Figure 1-47.

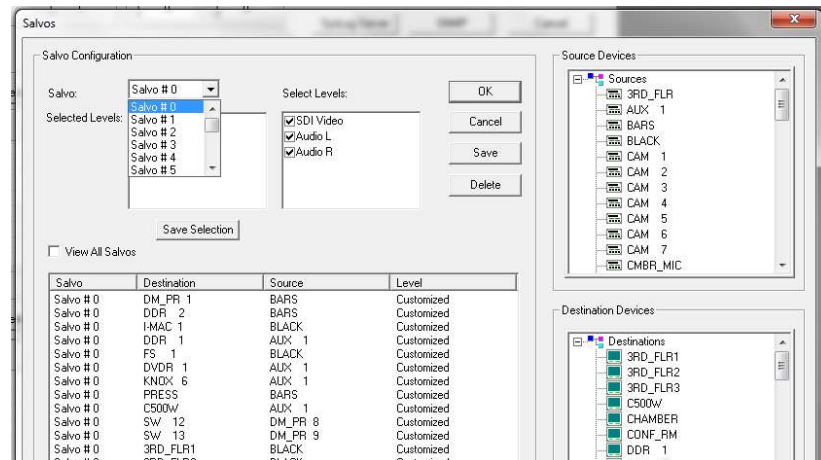

Figure 1-48.

Select the salvo to edit by using the drop-down menu (upper-left corner), then select the desired *Level* by clicking the check boxes in the 'Selected Levels' group area. Next, add Outputs (dragged from the lower-right column) and the Sources (upper-right column) that will be associated with the Outputs.

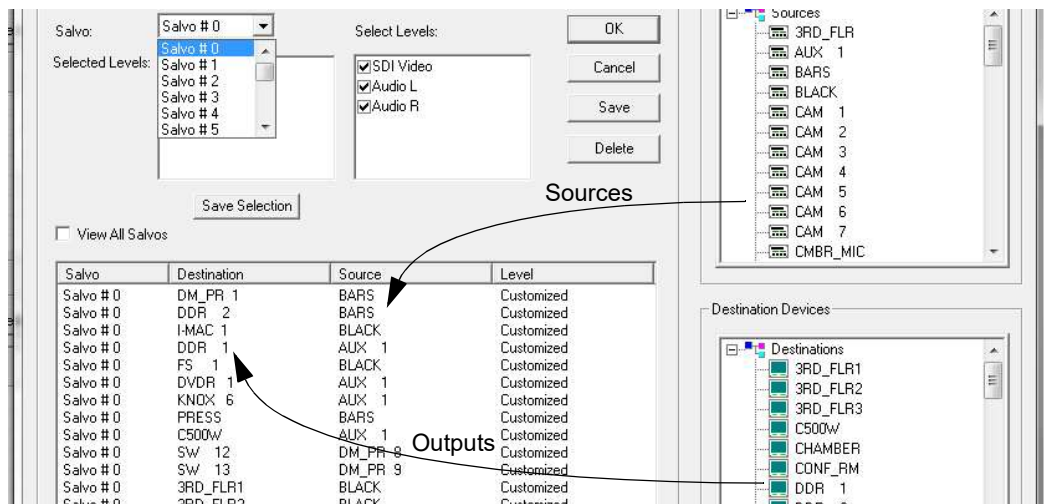

Figure 1-49.

Click OK when you are finished defining Salvos, which will return you to the previous dialog. From there, click the OK button to return to the UCON Home screen.

Right-click your panel icon and select Edit from the pop-up menu.

[illegible]

Figure 1-51.

Note: If you are working with a pre-existing template for salvo use, make your template selection from the Panel menu. Your display will resemble the Figure above once your template is loaded.

The Main menu is indicated with the highlighted cell at the upper-left corner of the display.

Figure 1-52.

Sources and Destinations are applied to the Control and Entry columns by dragging any and all source and destination from the listings at the right side of the display.

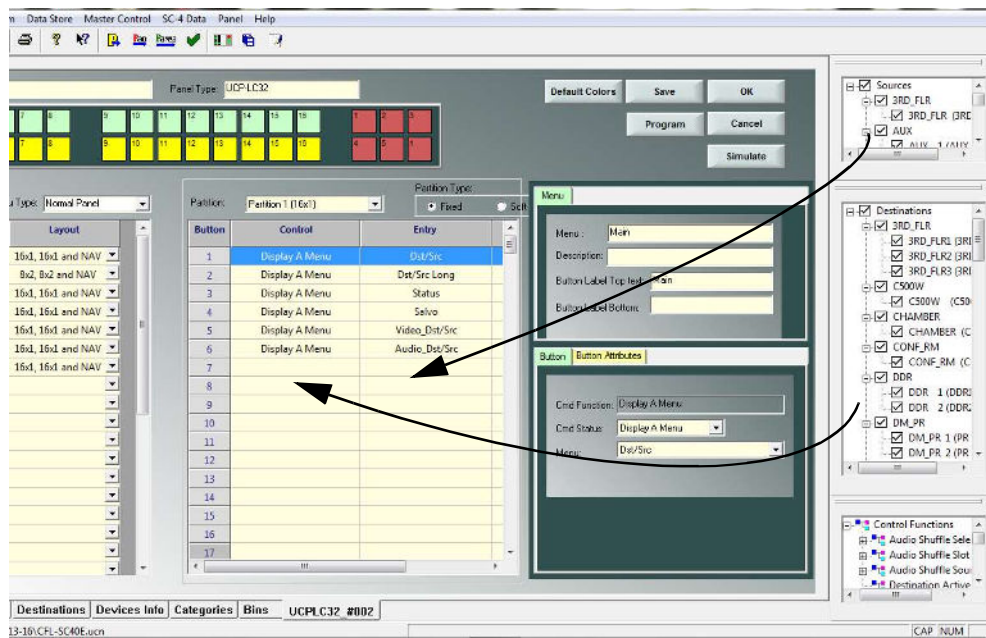

Figure 1-53.

Once a Source or Destination is dropped into a row, the Control and Entry columns will update, displaying the specific name (Entry column) and the router's Source or Destination (Control column).

Status menus can be added to the table by dragging the corresponding menu selection from the lower-right listing to a blank row, or an already populated row if you'd like to update the contents.

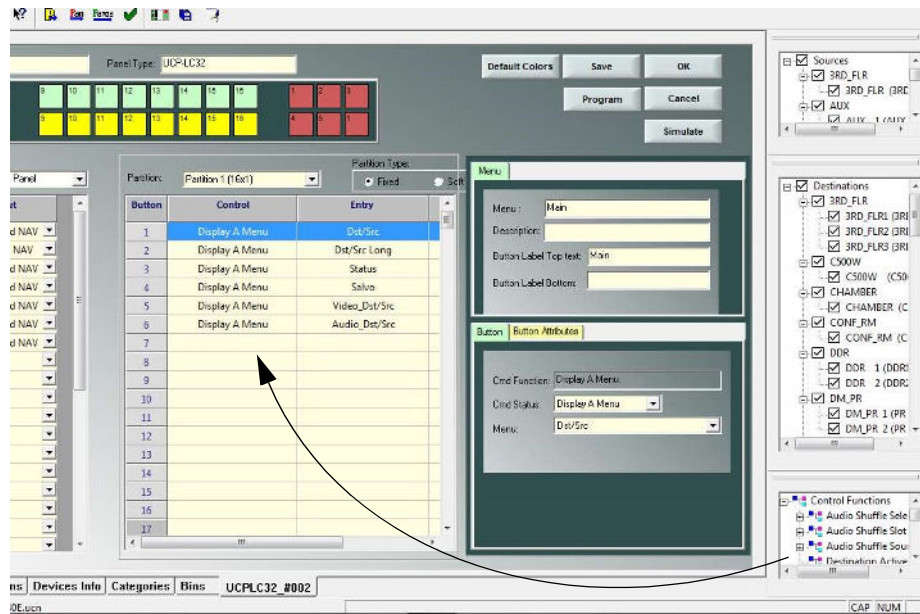

Figure 1-54.

In our example, the completed steps to this point have allowed us to define a set of buttons for the originally highlighted menu (see Figure 1-52).

System Salvo Definition

In the Name column (left-hand table) a salvo is indicated as a *new menu* item by typing 'Salvo' in the blank, highlighted cell. This will add the salvo to the panel menu.

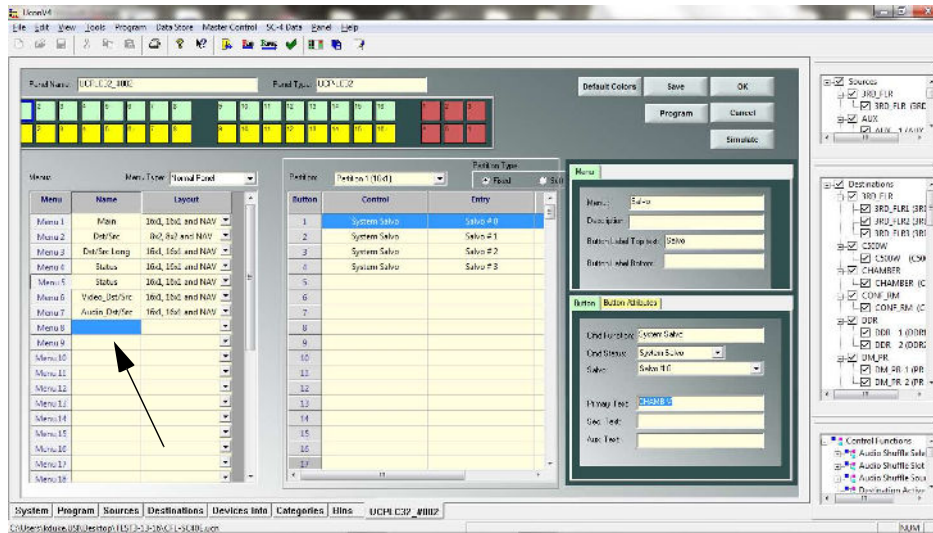

Figure 1-55.

Next, select the layout type from the drop-down menu.

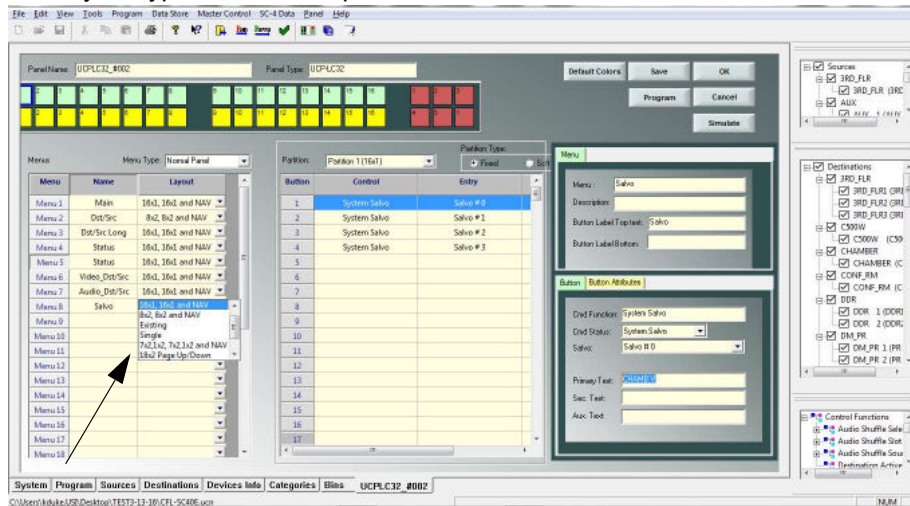

Figure 1-56.

Now, define the salvo by adding the control function to the column (shown below).

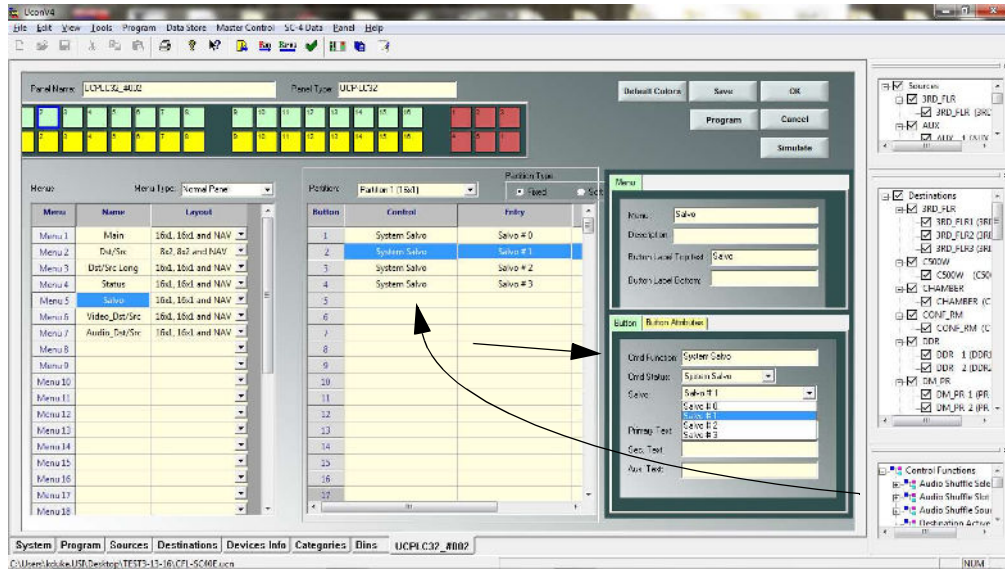

Figure 1-57.

As you make highlight selections (Control/Entry columns), the 'Button' tab area changes (blue arrow above). In our example, two salvos were set up (Salvo #0 and Salvo #1). For reference, see Figure 1-49.

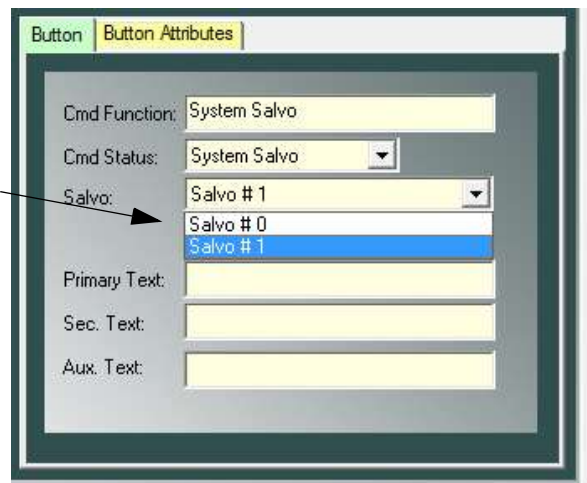

Figure 1-58.

Salvo Rename

If you would like to rename the salvo, select one of the salvos from the drop-down menu (shown above), and type a new name in the 'Primary Text' field to more appropriately depict its actual use ("control1", "mobile2", etc.).

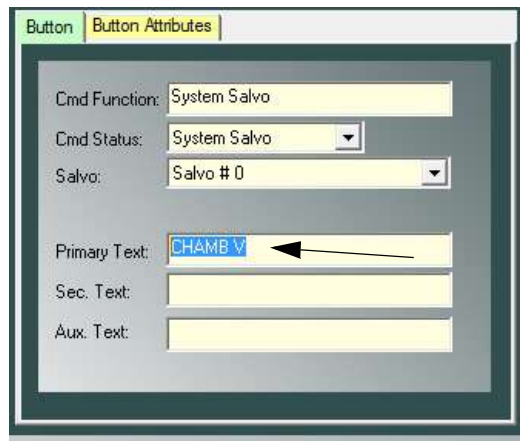

Figure 1-59.

At this point, two salvos have been defined and named, and will be loaded onto actual buttons when the panel is programmed. The rMan status screen will reflect the Takes as each occurs once the salvos are defined.

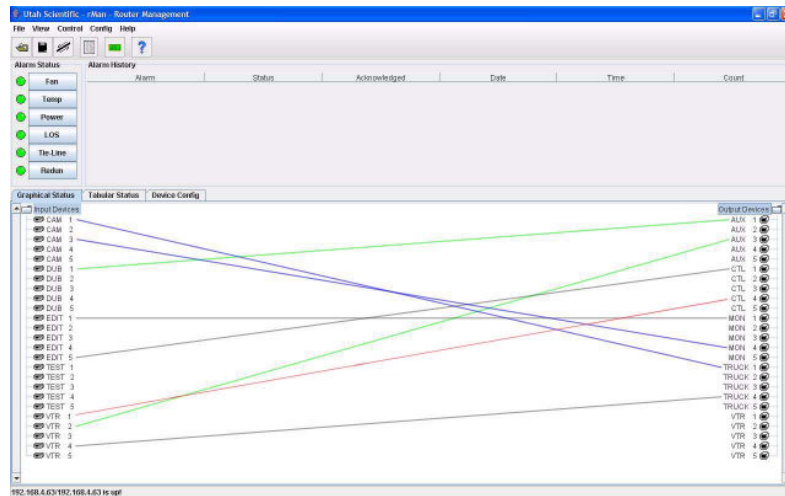

Figure 1-60.

Adding Existing Salvos to New Buttons

This sequence describes the salvo setup process when the salvo itself is already defined (see See “Setting Up a Salvo” on page 32.)

First, select the menu to which is the salvo to be added.

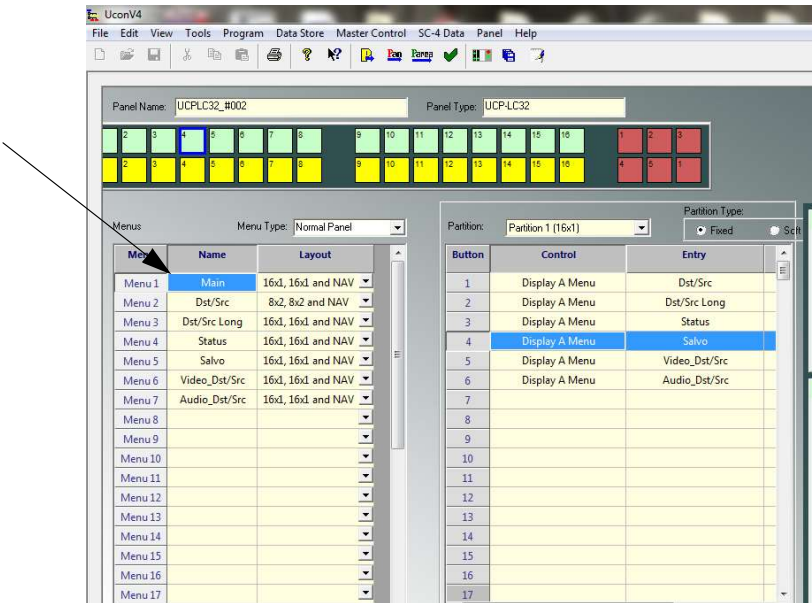

Figure 1-61.

You can select any menu within the listing. (This menu item can be renamed at this column location if necessary.)

Select the needed layout from the drop-down menu.

Figure 1-62.

Highlight the **Main** menu in the *Name* column, then select the 'Menus' listing in the lower-right selection dialog.

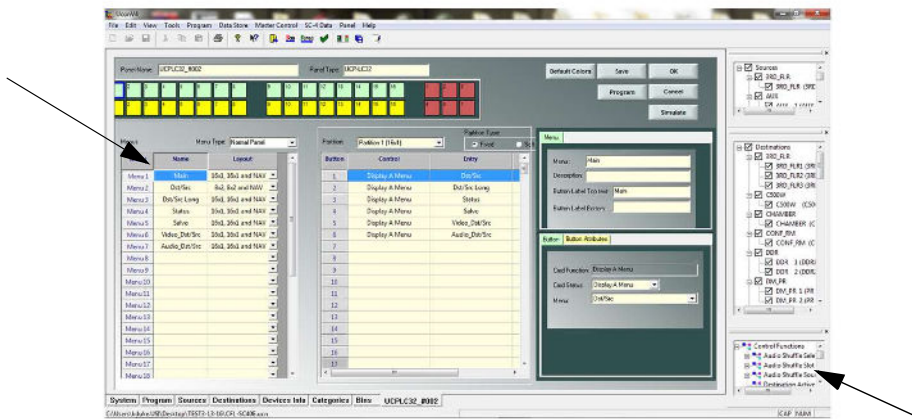

Figure 1-63.

The salvo just created (Figure 1-62) will appear in the lower-right listing. Drag this menu item to the Control/Entry columns (below).

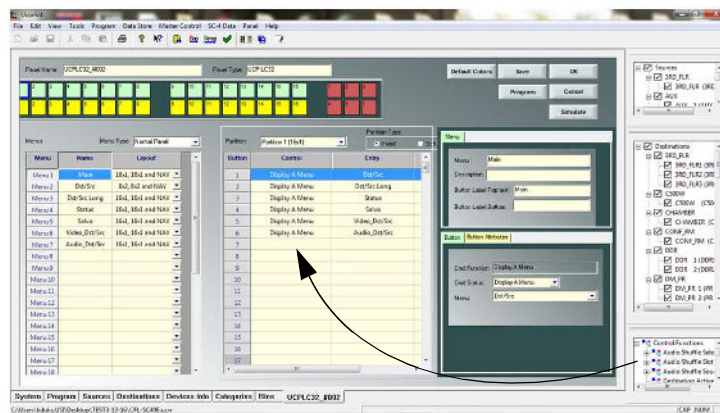

Figure 1-64.

Now highlight the new salvo listing in the *Name* column, then with the salvo highlighted in the Control/Entry columns, define the button attributes in the adjacent dialog window (see below).

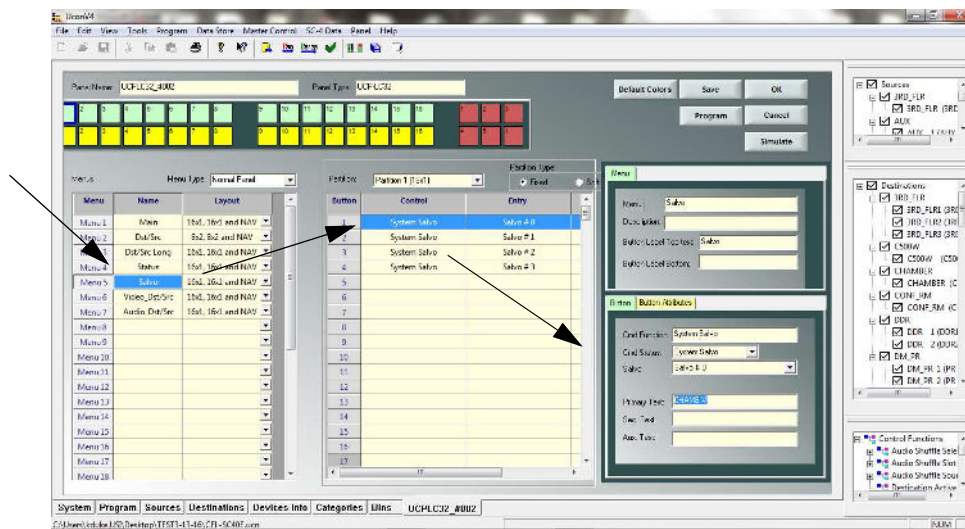

Figure 1-65.

Select one of the salvos from the drop-down menu, then rename it if desired.

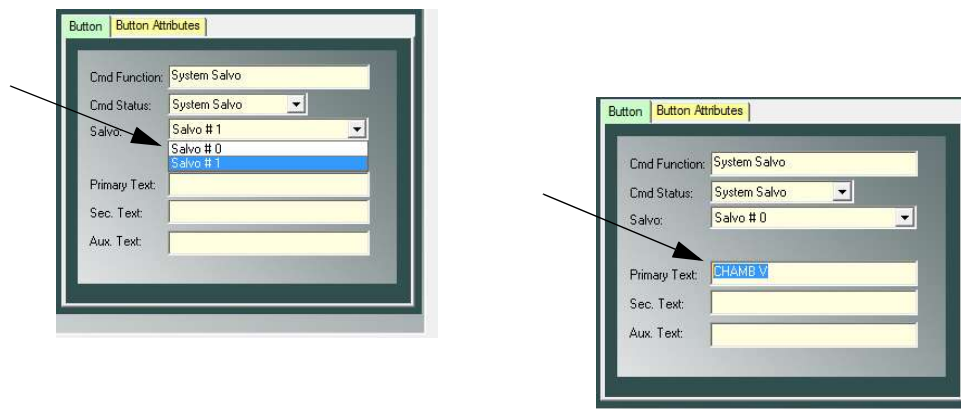

Figure 1-66.

Now click the **Button Attributes** tab and change the button color if needed.

Repeat the above step to add an additional salvo to a button.

Once the salvos are in place (added to buttons), click Save, then **OK** to return to the main UCON interface, or you can click **Program** to send the new button designation directly to the panel. The fixed panel will now contain button labels that correspond to the names and functionality designated in this exercise.

Operation

When opened, the rMan display will contain the live status of all input and output connections as each Take is made at the router.

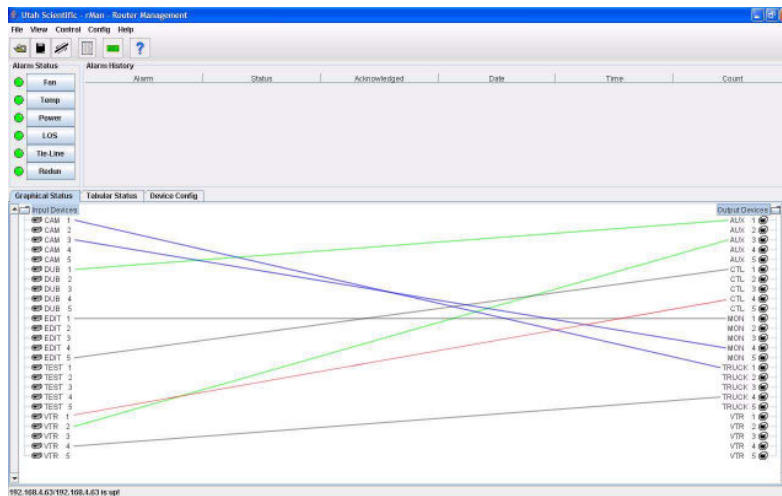

Figure 1-67.

Index

Numerics

- 16x1 1-9
- 16x1 example 1-22
- 16x2 1-9
- 16x2 display 1-21
